

Secure Email Messaging

Cloud-Based Email Encryption, Control, Secure File Sharing and E-Signatures for your business.

Share Messages and Files Securely...

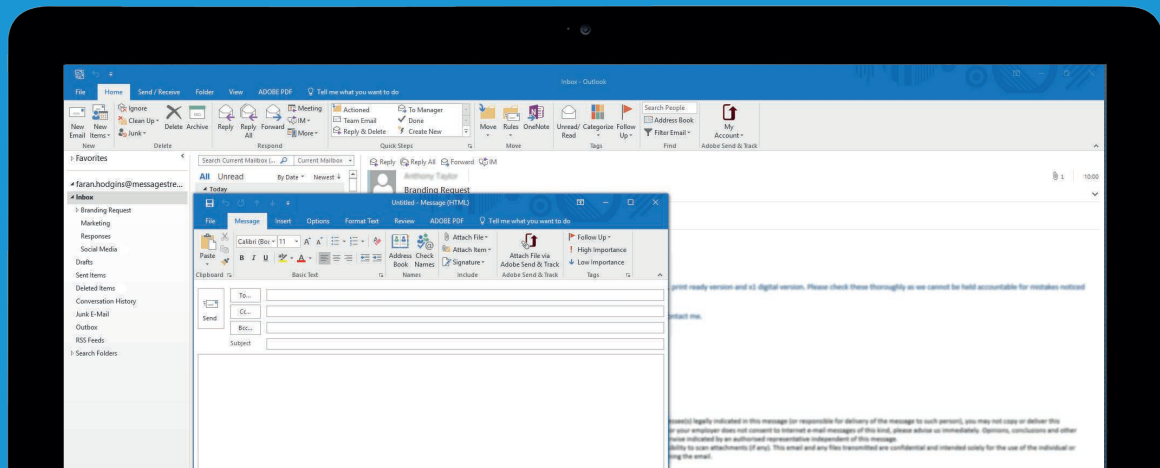

Did you know that you share thousands of unsecured emails every day? We have the solution for you...

Secure Email Messaging provides an Email Encryption feature so that you can send, receive and track secure corporate messages and attachments using any existing email address or platform. With Secure Email Messaging you'll also benefit from an advanced message control and a delivery slip feature, the ability to send secure large files up to 5GBs quickly and know in real time when and how information was received.

Secure Email Messaging is also compatible with Hosted Exchange and Office 365.

Quick & easy to set-up

There's no complex installation required, it takes minutes to set-up and is fully functional on mobile devices. In addition Secure Email Messaging's robust feature set enables real-time message tracking and control, large file transfers, secure e-signature validation, and regulatory compliance and archiving capabilities.

Why Secure Email Messaging?

Send Private Emails to Anyone

Send fully secure emails to internal employees, partners, customers, patients — anyone, without requiring them to download special software.

Encrypt and Send in One Click

Never leave your inbox to encrypt a message. Simply hit send to secure your emails and stay compliant.

Securely Share Large Files without Clogging Your Inbox

Email files up to 5GB quickly, bypass pre-set file size limitations and know instantly when a file is accessed or shared.

Experience Anxiety-Free BYOD

Allow users to share messages on mobile devices without compromising security or data integrity.

Know the Who, When and What of Your Email

Receive real-time message tracking and notifications with 100% accuracy. Know when an email was received, read, answered, forwarded, deleted or printed and who took the action.

Hit Send without a Second Thought

Protect and control extra-sensitive messages with ForwardFreeze, ReplyFreeze, and FYEO (For Your Eyes Only). Recall messages and their attachments (even if already opened).

Send Secure Information from any Web Page or Cloud-based App

With our Messaging API you can integrate secure sharing into almost any web-based app or web page as a secure web form to protect data.

Take It Easy: Deployment Is a Snap

Not an IT expert? No problem. We install the solution for you in minutes, with no extra hardware or MX records to transfer.

Rest Assured When It Comes to Compliance

Maintain data privacy and comply with regulations through our advanced encryption capabilities, extensive controls and unique secure architecture.

Budget with Confidence

Our single-price subscription includes all of the solution's features, plus new functionality that is updated quarterly.
